

## velorian Bio-Bike Blinkerset

The velorian Bio-Bike Plug&Ride blinkerset for all bikes without their own battery. Also for cargo bikes, recumbents, tricycles and children's bikes.

The commercially available and replaceable battery lasts for several weeks and can be recharged via USB-C.

A commercially available Li-ion rechargeable battery in standard format is used. The charging electronics use intelligent software to ensure a long battery life.

The system can also be connected to the hub dynamo, which charges the battery while riding.

With the additional extension cables, the set can be adapted for bikes of any size.

The set consists of:

- d-line blinkerbox with its own battery and battery charge sufficient for several weeks depending on use
- Operation via toggle switch or flashing LED button
- various LED indicators for front and rear
- indicator brackets

In the example shown, the set is equipped with a special handlebar and handlebar end indicators.

With our universal brackets, the indicators can also be mounted on existing handlebars.
