

THE FIRST HELMET WITH AN AIRBAG

THE PROBLEM WE SOLVE

+10.000 head injuries / year in cycling accidents, just in Europe (European Transport Safety Council, 2018).

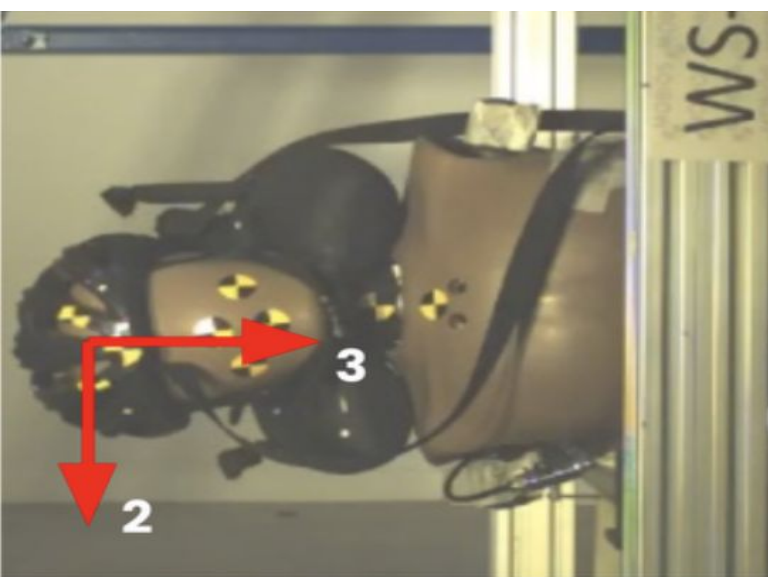

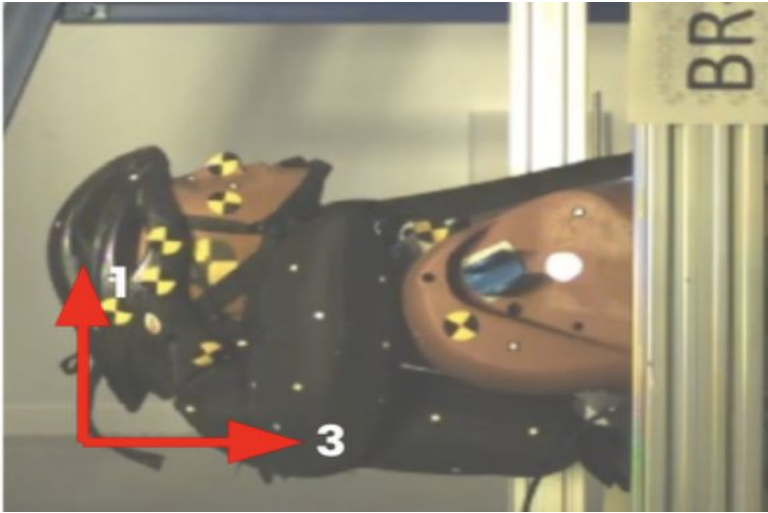

The risk of neck injury is markedly increased by the presence of a head injury.

OUR SOLUTION

- A cervical airbag system integrated into a helmet.
- The airbag deflates when the system detects that an accident is happening.
- Reducing the neck's movement to reduce the probability of suffering a neck injury.

FOUNDED IN SCIENCE

We have partnered with universities, organisations and businesses to develop and validate our solution from a medical perspective.
