

## Lemmo Zero – Unfold the evolution!

Lemmo, the Berlin-based light electric micro-mobility company, pioneered the E+ modular platform — a breakthrough design that separates the bike frame from its electric components, combining the best of traditional bicycles and e-bikes. This innovation created an entirely new dual-mode, E+ Bike category, earning Lemmo prestigious industry honours such as the iF Design Award and the Red Dot: Best of the Best Award.

Introducing Lemmo Zero — a bold new model born from the idea of unlimited travel. Designed for maximum portability, it fits easily into a car trunk, train, or even on a flight. Thanks to its unique arch-structure carbon fibre frame, the folding mechanism is integrated directly into the frame, reducing its overall size by over 20% compared to traditional folding e-bikes with 16" wheels. This allows Lemmo Zero to roll effortlessly into most car trunks and even fit inside a standard large suitcase — ready to check in and travel anywhere.

Air travel is just as easy: with a battery capacity below 160Wh, Lemmo Zero meets airline safety regulations, making it one of the few electric bikes you can take on a plane.

Built from Toray T700 + T800 carbon fiber, the frame keeps the total weight at just 12.5 kg, including the battery. As with all Lemmo models, the battery — known as the Smartpac — also doubles as a power bank for your devices.

Of course, Lemmo Zero connects seamlessly to the Lemmo App, where you can monitor your ride data such as distance, speed, battery level, and location via GPS. For added convenience, an integrated phone holder on the handlebar lets you secure your phone and enjoy a smarter, smoother ride.
